

PREPARED FOR SUMMIT FIELD SERVICES LLC

Where your money actually lies.

We analyzed 250 invoices across 18 months of your billing history. You already know what is outstanding. This report shows you the thing your accounting system cannot: how your customers actually pay you, and what that behavior costs.

\$407,550

Open receivables today, across
31 invoices and 15 customers

\$135,561

Your average monthly billing
over the analyzed period

\$86,917

Cash permanently parked with
customers because of slow
collection

You invoice on **30-day terms**. Your customers pay, on average, at **50 days**. Those 19 extra days mean roughly **\$86,917** of your own cash is always sitting in other people's bank accounts, interest-free, permanently.

The next three pages show where it sits, which customers hold it, and the ten moves that release most of it. The detailed record behind every number starts on page 6.

HOW YOU ACTUALLY COLLECT

Net 30 on paper. Net 50 in reality.

Every invoice you issue quietly grants an extra 19 days of credit you never agreed to. On \$135,561 of monthly billing, that gap is the \$86,917 figure on page one. It is not a metric problem; it is a working capital problem.

WHERE THE OPEN \$407,550 SITS TODAY

\$66,100 of your money is more than 90 days old.

Collectability decays sharply with age; industry experience puts recovery odds past six months near a coin flip. Every one of these invoices needs a named action this week: a final notice, a structured plan, or a conscious write-off decision. Silence is the one option that costs money.

What the slow collection costs in interest alone: about \$10,430 a year.

If your credit line prices at 12%, financing the \$86,917 gap costs roughly \$10,430 annually. That is the price currently being paid for inconsistent follow-up, before counting the hours spent chasing or the invoices that age into losses.

Who pays, who drags, and who is changing.

Your model payers

Apex Mechanical, Harborline Interiors, TrueNorth MSP, Pinewood Consulting. Pay within a week of terms, every time. Gentle touches only.

Your credit donors

Vantage Media (59d late avg) and Northgate PM (44d) take two extra months of credit on every invoice. Behavior responds to consistent process.

The one to watch

Meridian Health Partners was among your most reliable payers; recent invoices show an 11-day deterioration. A relationship call this week beats three reminders next month.

CUSTOMER	INVOICES	BILLED (18MO)	AVG PAYS AT	TERMS	AVG LATE	TREND	READ
Cascade Logistics	13	\$308,850	40d	Net 30	9d	-3.8	Mildly slow
Granite Civil Group	12	\$299,500	70d	Net 45	25d	-1.9	Chronically slow

Harborline Interiors	17	\$44,250	17d	Net 15	2d	+0.1	Reliable
Pinewood Consulting	8	\$24,450	18d	Net 15	2d	-0.8	Reliable

The ten moves that release the most cash.

Ranked by impact: open value weighted by age and payment history. A \$100 invoice at 100 days will never outrank a \$30,000 invoice at 45 days here, because this list optimizes your cash, not a ratio. If you focus on everything, you focus on nothing; these ten hold \$382,000 of the \$407,550 open.

#	CUSTOMER	OPEN VALUE	WTD. AGE	RECOMMENDED FIRST MOVE
1	Ridgeline Builders	\$115,200	62d	One account-level call; consolidate all open items into a written plan (they honor plans).
2	Granite Civil Group	\$79,900	28d	Dated final notice on the 90+ item; confirm retainage release milestones in writing.
3	Seoul Pharma Trading	\$18,550	35d	Broken-promise pattern: quote their last commitment; require a dated schedule.
4	Vantage Media Group	\$27,300	20d	Chronic 59-day payer: firm ladder now; move to prepay or tightened terms at renewal.
5	Foundry Dev Collective	\$54,100	8d	Verify milestone sign-off; isolate any disputed line, collect the clean balance now.
6	Northgate Property Mgmt	\$12,800	26d	Fixed-cycle payer: align invoicing to their run cutoff; chase the cycle, not the person.
7	Meridian Health Partners	\$22,000	3d	Deteriorating fast (+11d): a relationship call this week to find the cause.
8	Cascade Logistics	\$23,450	0d	Single large invoice: a direct AP status call; likely approval cycle, not refusal.
9	Stellar Staffing Co	\$14,400	0d	Reliable: gentle nudge only, protect the relationship.
10	Quarry & Co Wholesale	\$14,300	0d	Standard ladder; if a new PO arrives, trade clearing for shipping.

Why the order looks like this

Ridgeline tops the list on sheer weight, and their history says one structured conversation resolves it: they have honored payment plans before. Meridian ranks despite moderate value because deterioration caught early is cheap and caught late is a write-off. Vantage ranks on chronicity: 59 days of average lateness is a standing policy of theirs, and it changes only when your process does.

Three habits release most of it.

1

Make day 3 inevitable

One friendly reminder, three days after due, invoice attached, every invoice, no exceptions. Consistency is what re-sorts you in every customer's payment queue. Your model payers already treat you this way; teach the rest.

2

Work the ten, weekly

Thirty minutes, the impact list on page 4, oldest money first. Account-level conversations for multi-invoice customers, one consolidated ask, never five parallel nags.

3

Track every promise

"Paying Friday" gets written down and checked on Friday. A promise that slips unwatched is free; a promise followed up the next morning is usually kept the second time.

Businesses that run these three habits typically collect **10 to 15 days faster** within two cycles. On your book, that is roughly **\$54,224 to \$67,780** released back into your account, once, permanently.

RevCollect runs this entire playbook automatically.

Every reply read and classified. Every promise tracked to its date. Every follow-up drafted with the invoices attached, waiting for your one-tap approval. And the judgment layer this report demonstrates, working your book every night. This audit is what the agent saw in your history; the trial is what it does about it.

Value-weighted age answers "how old is this customer's money," weighting each open invoice's age by its value, so one large old invoice reads as the problem it is. Impact is open value multiplied by weighted age; it is the ranking key for page 4 and for where follow-up energy should go.

Every overdue invoice, oldest first.

INVOICE	CUSTOMER	ISSUED	DUE	AMOUNT	DAYS PAST DUE
INV-5167	Northgate Property Mgmt	2026-02-09	2026-03-11	\$2,300	133

Plus 16 invoices currently within terms (not yet due), totaling \$172,850. The full line-by-line record, including these, is in the companion workbook.

How every number was computed.

Data. 250 invoices issued between January 2025 and July 2026, pulled from your accounting system with payment allocations: issue date, due date, amount, payment date, and status per invoice. 219 are settled; 31 remain open as of the analysis date (22 July 2026). No sampling; the full record was analyzed.

Days to pay. Payment date minus issue date, per invoice, averaged with value weighting so large invoices count proportionally. Your value-weighted average is 49.6 days against value-weighted terms of 30.4 days.

Cash locked. Average monthly billing multiplied by the excess credit days over 30: $\$135,561 \times (19.2/30) = \$86,917$. This is the additional working capital your business permanently finances because collection runs slower than terms. It is released, once, when the gap closes, and the interest line assumes a 12% cost of funds; substitute your actual rate.

Behavior and trend. Per customer, average lateness across settled invoices; the trend compares the recent half of their settled invoices against the earlier half, positive meaning slower. Customers with fewer than six settled invoices show no trend.

Impact ranking. Open value x value-weighted age, adjusted for payment history. The ranking deliberately ignores pure day-counts: optimizing a metric (like DSO) rewards chasing small old invoices; optimizing cash rewards resolving heavy ones. This report optimizes cash.

Statutory note. Late payment rights vary by jurisdiction: many regions provide for statutory interest and fixed compensation on overdue commercial invoices, and contractual late fees generally require advance disclosure in your terms. Confirm the specifics for your jurisdiction with your accountant or counsel; this report is information, not legal advice.

About this audit. Produced by RevCollect from your connected accounting data. Names and figures in this sample are fictional demonstration data. When run on a live account, the audit refreshes monthly and tracks cash released against this baseline.
